

Innovation From ZOT

Stop throwing money out the door, with the rising price of electricity everyone is looking for a way to save money, and here is a way to cut expenses by 90% . . .

ZOT's Revolutionary LED MINI BULBS

For Masking Unit Systems and Foul Lights
(12 & 24 Volt Versions)

- **Efficiency:** LEDs produce more light per watt than incandescent bulbs.
- **Cool light:** In contrast to most light sources, LEDs radiate very little heat in the form of that can cause damage to sensitive objects or fabrics. Wasted energy is dispersed as heat through the base of the LED.
- **Lifetime:** LEDs can have a relatively long useful life. One report estimates 35,000 to 50,000 hours of useful life, though time to complete failure may be longer. Fluorescent tubes typically are rated at about 10,000 to 15,000 hours, depending partly on the conditions of use, and incandescent light bulbs at 1,000–2,000 hours.
- **Shock resistance:** LEDs, being solid state components, are difficult to damage with external shock, unlike fluorescent and incandescent bulbs which are fragile.
